Documents to submit

Infrastructure Architecture Diagram

- proxy, containers, IP addresses (host, containers), open ports (host, containers)
- App URL (at proxy)

Infrastructure Architecture Diagram

List of Docker images that you used with versions/tags

Configuration/script files with explanations where required

- Dockerfile(s)
- Docker compose file
- Proxy configuration file
- other files that you use with explanation of what you did

Describe configurations that you did to set the environment for FE, BE, proxy

Presentation guide (2 minutes)

Live demo:

- show Architecture Diagram
- show ports on containers
- show open ports on host, firewall status
 - `netstat -plnt`
- stop your containers; build a 2nd set of images and create a 2nd set of containers
 - NOTE: if you are unsure, stop your containers and create a 2nd set of containers instead
- show that FE can only be accessed via proxy

:D
